The aircraft, registered ZK-KUF, was found by a National Parks and Wildlife Service officer in Canberra's bushland on June 17, 2015, and recovered with the help of the ACT Emergency Services Agency. It was badly damaged in the landing, and not fit to fly, but according to the person who recovered the aircraft, the pilot managed to quickly fix it before leaving the area. It was taken to a hangar at the DFOACT in Lake Boga and repaired. The aircraft was flown back to Canberra on Tuesday morning by the pilot and a passenger, and spent 10 minutes in the air to make sure the repairs were correct. It has since been flown to Melbourne to be examined by a forensic engineer to determine its ability to fly. "He went down beautifully; he was right on the centreline. The only thing wrong was the left wing tip. We replaced it with a new one and he has been flying it all the way to Melbourne," the pilot, who did not wish to be named, told Fairfax Media. "I feel fortunate to have been able to fly it." The pilot also received a "good character" clearance from the Australian Federal Police for the flight, while the passenger, who was not revealed, did not. "They know what is expected of me, but I didn't want to talk about it with the media and the department," the pilot said. DFOACT chief aviation safety officer, Mark Trethewy, said it was exciting to see the craft fly again. "It is certainly a very rare event. I've been working at DFOACT since 2003 and the fact that it flew again was quite a surprise," he said. "As soon as we found it, the first thing we did was look at the engine and the airframe. It just so happened we had a tech on hand who was able to assess and rebuild the engine to the extent that we got it into the air again." It is unclear when the aircraft will be returned to the owner, who would have to pass a test before it could be flown.
