I am hoping someone can explain this to me. From a given set of points  $P_1$ ,  $P_2$ ,  $P_3$ ,  $P_4$  which lie on a line, determine a curve containing all of the points and pass through the points  $P_1$  and  $P_2$ . The problem then is that I have to color the curve twice, depending on whether the points  $P_1$  and  $P_2$  are equal, and also color whether the points  $P_2$  and  $P_3$  are equal. I will update my problem and clarification once I find a solution to this, and I will post it as an answer if it is useful. Thank you in advance for the help! A: In general, the problem is relatively easy if you know how to generate a quadratic Bezier curve. For example, you can generate them with code like this:  $x_1 = 1$ ;  $y_1 = 1$ ;  $x_2$
