ModelSim is a high performance, single-hardware, system-level simulator for Verilog,VHDL, and SystemC. ModelSim includes a library compiler, HDL Debugger, waveformviewer, simulation reports, and a Hardware Debugger. The ModelSim Code Generator is quite versatile (static and multithreaded), because of the choice of design extensions along with the ability to register custom extensions for your application. Besides, the output can be used for simulation. To run and debug your application you need ModelSim program with all the extensions. The straightforward UI is very convenient with a built-in text editor. The integrated debugger also permits extremely easy setting breakpoints. Please get the Version from Latest version 1.8.2 available now!. The integrated debugger is excellent for debug because, it also permits easy setting of the breakpoints. It also shows the levels of the SRAM for internal blocks. To run and debug your application you need ModelSim with all the extensions. Click on "Load" to select the desired model, the "Apply Changes" button will upload the files to the ModelSim directory, and the program will start in the new mode. To continue the run without the debugger, click on "Step" in the command-line mode. Otherwise, you can use the debugger. It's extremely easy to manipulate the variables in the memory view, or to select the SRAM view. Take a look at the latest Version from Latest version 1.8.2 available now!. The terminal mode with all the customizable settings to use ModelSim together with all the extensions. You'll be able to run one or multiple files for the previous save state, or add a new case and Save/Open. You'll be able to perform various operations on the memory, such as: memory dump, save memory to file, memory read/write, memory reset and you'll be able to select the memory type as TCM, SRAM, or IO. The intuitive command-line mode can be used to debug your application and stop it at a specific point. You'll be able to set multiple breakpoints in one line.

Mentor Graphics ModelSim SE 10.4 English 64 bitWin 502 MBMentor Graphics was the first to combine single kernel simulator (SKS) technology with a unified debug environment for Verilog, VHDL, and SystemC. The combination of industry-leading, native SKS performance with the best integrated debug and analysis environment make ModelSim the simulator of choice for both ASIC and FPGA designs. We will need a video with SSH acces that has a working version of ModelSim installed. I suggest you use a Linux computer because Mac OSX and Linux are both Unix-like systems. If you use a Windows compile server, you may run in to troubles with the path format (backslashes on Windows!). You can either use a remote computer, or set up a virtual machine (using something like Parallels or VirtualBox on your Mac.
