if you're looking for that perfect drum
sound, slate drums 4.0 is an exceptional
choice. its drums are rock-solid, its kits
are easy to manipulate, and its sounds
are dynamic. ssd4 also gives you the
ability to save your drum sounds for any
future use. no other company can make
kits that sound like this. no other
company can do what slate drums 4.0
platinum can do. all of the music in
steven slate drums 4.0 is programmed
from scratch using slate's signature
drum processor, the slii. every drum
sound in the library is designed to be
truly compelling to the ear. the slii is at
the heart of the library, providing the

ultimate performance chops and clarity. it is the sound of the future, and the future is now. i want to say right now that even if you are an experienced drummer, you still will not feel comfortable with this plugin. you will be scratching your head all the time, and you will be unable to play in the comfort of your home. its not because of the sound, it is because of the control and the simple interface. plus theres lots of cool features that most users will not notice or use. the ssl vintage vibe of the ss4 is undeniable, and its hard to ignore. yes, it is not as easy to use as a plugin like rpads eq, but it is still simple and easy to use. i know there are some of you who have experience with drum plugins, and you will still need time to learn how to use ssd4, but trust me, its worth it. the only problem that i had with ssd4 is that it does not come with any processing effects at all. you can of course put your own effects on the drums, but its not the best way to do it.

it would have been a lot easier if the ssd4 came with some effects, like a saturation, delay, and reverb and so on.
