One of the great things about Photoshop is the ability to use layers to build complex images. This allows an experienced user to easily add, remove, and edit different parts of an image. For example, you may be able to remove a person from a photo and make it all black and white, or add a crown of flowers on a wedding photo, giving it more impact. This is referred to as the layer mask. Layer masks are useful because they allow you to turn something on or off by adjusting its opacity. The free version of Photoshop offers everything the paid version does plus some basic features. These include basic flattening, normalizing filters, and "Auto" features that are more commonly used by non-graphic designers. It also includes a feature called "Creative Cloud Libraries" that allow you to launch an exclusive group of versions of Photoshop CC and Photoshop Lightroom CC into a specific library from any computer. You'll need to be part of a Creative Cloud subscription to use these features. Here you can get started with any of the Photoshop tools for free. Basic capabilities include creating and arranging elements, as well as using special brushes, transform, and gradients. Also included is the ability to create and export images for social media. Starting with Photoshop CS6, Adobe began to look into ways to allow users to experience Photoshop online as well as through a PC or Mac. So, Adobe created choice now gives unlimited access to the tools, features, updates, and training online — and free for a year. When you start to use PS choice, you need to link your account by entering your email address and a password. You will then be asked to link a device and download the app to use Photoshop. 933d7f57e6

Photoshop, in all its complicated glory, has spread a lot of its information throughout the program, making it that much more difficult to train how to use it for your personal use. You will know when the features are available by a little flag next to the effects filter, such as Enhance, Clone or Defringe. For each feature, there is a little purple "A" that shows it's not activated yet. This allows you to easily try each one before you activate it. Switching from one filter to the next is fast, and very easy to do. As mentioned earlier, this is a very simple feature to use. While their are a bunch of settings, the slider is the simplest way to control it. The slider range determines how much of the effect you want to see. To select the range, look for the "+" sign to the right of the buttons, and then drag the white dot up or down.
