- User Manual: Tech-Pro WinTouch - Change Date and time of files with a single click! Tech-Pro WinTouch is a simple-to-use and straightforward piece of kit that allows you to change the time of modification for files. It can be handled by all types of users, even by the ones with little or no experience in such tools. After a quick installation procedure, you are welcomed by a standard frame with a minimalistic layout, representing

Tech-Pro WinTouch' interface. The "what you see is what you get" principle clearly applies to the app, as there are no other options available, aside from the ones shown in the main frame. Files can be imported into the working environment by using only the "drag and drop" method; you can add as may items as you want. Once the new date and time have been established, you can apply the new changes with the simple

click of a button. In addition, you

Tech-Pro WinTouch

If you have previously used and used a tool called John's Macro for Windows, you will feel right at home with the Tech-Pro WinTouch software. It is mainly because the Tech-Pro WinTouch window doesn't differ from the window displayed by John's

Macro, with a couple of exceptions. Firstly, you can apply the changes to a number of files, instead of just one. Secondly, the app has a much simpler and minimalistic interface. From the app's frame, you can start the process of modifying the timestamps of one or more files. You can import the files by dragging and dropping them into the Tech-Pro WinTouch window. Once the files have been selected, you can click on the

"Modify" button to use the app's functions. The most interesting function is the one that allows you to apply the same timestamp to multiple files. It is called "Apply", and can be used as many times as you want. As for the modifications you can apply, you can set the modified date to the current date and time, just as you can with any other app. Of course, there is a difference. The Tech-Pro WinTouch app doesn't need to

run as a Windows service or a scheduled task to get the job done. You can change the date/time manually, which is what we recommend. Our opinion: Tech-Pro WinTouch is an excellent tool to use if you are looking to modify a number of files' timestamps. The app does not use a lot of resources, which makes it ideal for low-powered computers. It also has a much simpler interface than the John's Macro for Windows, making it

easier for less experienced users to get the job done. The only reason that we can find why a Windows user would not consider this application is that it does not have the ability to change the timestamp of multiple files simultaneously. Joomla! The Open Source CMS for Higher EducationThis page is the documentation for Joomla! We are sometimes asked, "Why Joomla?" While Joomla is a powerful content management

system, it's also easy to use. Joomla! creates dynamic websites for educational institutions. Joomla! has a growing user base; it's easy to use and always evolving. We use Joomla! for our website, courses, and learning materials We can't recommend Joomla! highly 2edc1e01e8
