The benefits of capturing RAW files are that they are not compressed. They can be more difficult to work with than JPEG files. However, they are also larger than JPEG files by about 10 times. It could be difficult to edit a RAW file if you were to try to see the image in your computer monitor with a resolution of or less than what is possible with a camera. Photoshop CS6 is improving the displaying of RAW files on your monitor. With the new RAW display, you can now work with your RAW files and view them on the desktop monitor, your tablet, or your phone.

But there are times when I find the many, many feature enhancements in Lightroom just get in the way. I have many more features operating system features that let me do things faster or more automatically. As a search and shoot, perfect from image to image, Lightroom is both easier and more effective, and the new features in Lightroom 5.4 make it a better solution. The previous step, being an image editor, is great if you bring the help of another photo-editing pro to collaborate on adjustments. Just as design is a collaborative versus individual undertaking, and art is a collaborative effort, so is editing. Now, you can collaborate extensively, and do so without modifying the original file and without the need to keep track of the changes made to a file. This final feature allows you to apply exactly the same kinds of uni- and/or bi-polar adjustments to multiple images without losing track of the original adjustments made to each image. So, all of your images can be worked on simultaneously. With Share for Review, you can kinda sorta collaborate via the cloud, and that part is great. But the reason to make these changes without modifying the original images is that you can also further tune your adjustments in the cloud, and that's the part about Share for Review that really makes the integrations with third-party tools. First, it lets you leave comments on your photos via the cloud without editing any of them. You can also look from afar at the comments people have left on your photos. Finally, while you're "sharing," you can even hide the images, if you want, in the cloud instead of the viewer. That's a nice bonus feature that makes the collaboration even more seamless.

Agile portfolio management tools help people manage and organize portfolios. Portfolios are collections of skills, applications, web content, and other items that people use to engage in their professional and personal lives. There is a wide variety of tools out there for organizing such portfolios. Possibly, one of the biggest limitations of agile portfolio management software is simply the time it takes to create a portfolio. However, it's not impossible to create a portfolio on many sites including LinkedIn, GitHub, and so on. Photos, videos, and ideas are usually much easier to produce.
