The updated desktop version of Photoshop now natively integrates with Apple's iCloud Drive, and support is available in the next few weeks. In the near future, the application will support iCloud Libraries, which let photographers manage content in iCloud from Photoshop and save time when working across multiple macOS or iOS devices. The beta of Share for Review enables Photoshop users to work together on projects without leaving the app, with the ability to not only resize and change fonts and colors, but also share animations, 3D layers and even slicing and dicing work. John Hellriegel, senior director, Adobe Creative Cloud and vice president, Creative Cloud said: "Share for Review is a great way for Photoshop users to learn and collaborate on tasks for the first time, especially as a way to integrate Dreamweaver, related workflow products and Adobe Spark into Photoshop," said John Hellriegel, senior director, Adobe Creative Cloud and vice president, Creative Cloud. "Share for Review demonstrates how we continue to empower Adobe creative technologies to help our customers, partners and businesses more quickly deliver their best work, no matter what surface they work on, and we look forward to shipping these changes worldwide." The new desktop version of Photoshop comes with multi-touch gestures for a more customizable and versatile experience. Users can now navigate up and down with a five-finger swipe, hold and drag to move around, and pinch and rotate to re-size content.
